

Figure S1. Effect of cell number on N/C ratio and normalization.

Figure S2. Chemical inhibitors against Protein Kinase A and AKAP, two candidate hits in this screen, have no effect on TGFβ-induced expression of SMAD7.

Figure S3. Hit siRNAs but not other siRNAs designed for the same target silence a TGFB2 3'UTR Luciferase construct.

Figure S4. Screen hits with a verified effect on TGFB2 are enriched for siRNA seed matches to the TGFB2 ORF.
